CBSE Board (75%)

Experience

NetLeap IT Solutions (Intern Front-End Developer) 31 Dec-31 Jan

Developed front end for a *Event Management Project* which dedicated to contributing to seamless event management for the people in the relative field.

PROJECTS

Automatic Hand Sanitizer (2021)

First year project.

The COVID-19 pandemic has radically affected life for almost everyone around the globe, and makers are no exception. With everyone being more careful of their interactions with humans and objects, personal hygiene has taken serious precedence over all other factors in public space. A lot of public places have hand sanitizers for visitors, but they need to be manually pressed.

IOT based Soil Moisture Monitoring System

In this project we used a soil moisture sensor with ESP8266 to build a smart irrigation system. We used a soil moisture sensor with ESP32 to build an IoT based moisture monitoring System, where the soil moisture will be displayed in percentage (%) on the Adafruit dashboard in the form of a graph as well as on an OLED display in the form of numbers.
